Professional summary

Energetic professional with strong communication and organizational skills. Seeks solutions to problems and applies analytical thinking to drive insights. Adept at multitasking, leading group discussions, and managing projects.

CERTIFICATIONS

Software Engineer, Frontend Developer, Java, Node.js, Rest API, SQL

Hacker Rank: <https://www.hackerrank.com/profile/bksraut27>

Work history

Full Stack Developer

Jan 2025 - May 2025

Dockland Creative Organization

London, United Kingdom

- Redesigned the One Newham volunteering website, making better UI structure and usability for community-based users and volunteers
- Expanded **10+ responsive web pages** using React, TypeScript, and Tailwind CSS, perfecting mobile usability and page consistency across the application
- Collaborated with a **team of 5 developers** on feature planning and UI development, contributing to **X+ sprint deliverables** in an Agile workflow
- View Project: <https://onenewham.vercel.app/>
- GitHub: <https://github.com/Docklands-Creative/newham-vcs>

skills

- **Languages:** JavaScript, Java, C/C++, C#, Python, JavaFX, TypeScript
- **Web Technologies:** HTML5, Tailwind CSS, React, Node.js, Fast API, jQuery, Django, Next.js, Spring Boot, Angular.js
- **CMS & Design:** WordPress, Figma
- **Databases:** SQL, MongoDB, PostgreSQL, Oracle
- **Tools:** Git, GitHub, Docker, VS Code, Slack
- **Concepts:** Responsive Design, Blockchain, Smart Contracts, Formal Methods
- **Currently Learning:** AWS (Cloud Fundamentals), PHP
- **Data Structures & Algorithms**
- **AI & ML:** Machine Learning, Deep Neural Networks (DNN), OpenCV, Computer Vision

Full stack projects Maithili shark (web3 + traditional payments)

- Designed a full-stack e-commerce platform with 10+ core features, including product uploads, cart management, secure checkout, and order tracking.
- Introduced role-based access for customers and vendors, enabling seamless multi-user interactions.
- Built a responsive cart and product management system supporting full CRUD operations, optimizing state updates to improve UI performance and user experience.
- Integrated blockchain-based payments using smart contracts with MetaMask, alongside traditional payment processing via Stripe.
- Enhanced transaction security and flexibility by supporting both decentralized and centralized payment methods.
- View Projects: <https://maithiliyshark.netlify.app/> | GitHub: <https://github.com/XeroHer/Vendor>

Full stack projects aijobportals

Introduced AI-powered job platform with **5+ key features** (resume analysis, job recommendations, dashboards), helping **2 user roles (job seekers and recruiters)**

- Implemented role-based access control for **2 user types (job seekers and recruiters)** with separate dashboards and permissions
- Applied user profile system with resume upload functionality facilitating **file storage and structured candidate profiles**
- Developed AI resume analyzer delivering **real-time feedback and job recommendations based on extracted skills and keywords**
- Created recruiter dashboard with **3+ core functionalities (job posting, applicant tracking, candidate management)** in a centralized interface
- Fronted: <https://aijobportals.netlify.app/> | GitHub: https://github.com/XeroHer/AI_JOB_PORTAL
- Backend: <https://aijobbackend.onrender.com> | GitHub: <https://github.com/XeroHer/AIJobBackend>

AI Project: Resume Analyzer

Project Overview

An AI-powered application that analyzes resumes and provides:

- ATS (Applicant Tracking System) score
- Skill extraction
- Job-role matching
- Resume improvement suggestions
- Keyword optimization

The system uses NLP (Natural Language Processing) and Machine Learning to evaluate resumes against job descriptions.

Academic AI Project: Object Detection Using YOLOv8 with KITTI Dataset

Project Overview

This project focuses on training the YOLOv8 model using the KITTI Vision Benchmark Suite dataset for autonomous driving applications.

The system detects:

- Cars
- Pedestrians
- Cyclists

The model processes road-scene images and performs real-time object detection suitable for self-driving car research.

Education

Bachelor of Science: Computer Science

University of East London

Sept 2023 – May 2026

London

Hobbies and interests

- Exploring new technologies and practicing problem-solving alongside personal interests in reading and music

Achievements

- Got recommendations letter from professor because of getting highest marks in two modules – **Web and mobile applications and AI**

language

English:
